EDUCATION

The George Washington University (GWU)

Master's degree in Computer Science

Aug 2023 – May 2025

Washington, DC

- **Coursework:** Data Structures and Algorithm Design, Cloud Computing, Database Management Systems, Object-Oriented Design, Software Engineering, Software Paradigms, Computer Architecture, Big Data & Analytics, Machine Learning.

BV Raju Institute of Technology (BVRIT)

Bachelor's degree in Computer Science Engineering

Aug 2019 – May 2023

Hyderabad, India

- **Coursework:** Formal Languages and Automata Theory, Web Technologies, Computer Networks, Design Patterns.

TECHNICAL SKILLS

Languages: Python, C#, Java, C++, JavaScript, TypeScript, HTML5, CSS3, SQL, R

Frameworks: jQuery, EJS, React.js, Node.js, Express.js, Django, SpringBoot, .NET, Bootstrap, Tailwind

Databases: MySQL, NoSQL, Oracle Database, PostgreSQL, Redis | **Operating Systems:** macOS, Linux, Windows

Tools and Technologies: AWS services(EC2, IAM, S3, VPC), PyCharm, Git, GitHub, Postman, Chrome Dev Tools, npm, Swagger, Docker, Jira, FreshDesk, Slack, Visual Studio, Eclipse, IntelliJ

WORK EXPERIENCE

Software Developer | METY Technology, VA

May 2025 – Present

- Working on a full-stack fracture risk assessment tool using Django, Python, and React.js for clinical web integration.
- Integrated CatBoost ML models into Django backend, reaching 87% accuracy on validation data for risk classification.
- Built a RESTful API for real-time fracture prediction, reducing response time by 35% between model and React frontend.
- Participating in weekly scrums and Agile ceremonies, contributing to sprint planning and incremental feature development.

Software Engineer (Technical Support) | Law Library, GWU, DC

July 2024 – May 2025

- Used React, Node.js, and MongoDB to develop a class recording tool with user-based access control and search features.
- Built server-side routes and database queries to retrieve student data, reducing video load time by 40% on access.
- Contributed to CI/CD pipelines with GitHub Actions, improving deployment speed and consistency across environments.
- Assisted implement folder-level access logic to secure course content across 30+ classes and six academic departments.
- Participated in Agile sprint cycles and contributed to comprehensive E2E unit testing for stable builds and service coverage.

Full Stack Developer Intern | Technovert Solutions, India

Aug 2022 – Mar 2023

- Built React-Node.js carpooling features including ride sharing, routing, and request handling using modular design.
- Designed ride request and scheduling modules, cutting average ride booking time by 35% through optimized state logic.
- Managed user login sessions using Express.js and JWT, implementing secure access handling for driver-passenger roles.
- Participated in 10+ Agile sprints, delivering tested UI and backend routes with a 95% on-time deployment success rate.
- Assisted in debugging UI components and fixing styling issues to ensure consistent layout and usability across browsers.

PROJECTS

Lost/Found | JavaScript, react.js, node.js, express.js, PostgreSQL

- Developed email alerts and reporting tools with RESTful APIs to automate and accelerate campus item recovery workflows.
- Engineered secure college ID-based login using React forms and backend logic to support verified user sessions and roles.
- Built real-time searchable tables and filterable lists using frontend components and SQL queries for faster item tracking.
- Designed backend validation and routing independently to ensure accurate item records and smooth data submission flows.
- Implemented comprehensive item categorization system with image upload functionality to enhance item identification.

Smart Campus Analytics Dashboard | Spring Boot, React.js, PostgreSQL

- Built a modular backend in Spring Boot with JWT-based auth to support role-specific dashboards for campus analytics.
- Developed RESTful services for managing activity logs and delivering student data to frontend React chart elements.
- Designed a responsive React dashboard with filters and graphs to analyze student attendance, lab use, and engagement.
- Used PostgreSQL for storing structured student records and analytical data with strong query performance and accuracy.
- Added caching and SQL data aggregation, boosting dashboard load speed by 40% and improving performance for users.

Finance Tracker Web App | React.js, Node.js, Express.js, PostgreSQL

- Developed full finance tracker with Node.js, Express, React, and PostgreSQL for transaction management and data analytics.
- Engineered a secure session-based login system and modular RESTful APIs to enable protected data interaction layers.
- Created responsive React interface with interactive charts and modular components to improve user experience and insights.
- Implemented normalized PostgreSQL database with optimized queries and schemas for enhanced performance and integrity.
- Added input validation and error handling to prevent invalid entries and ensure clean, accurate financial transaction data.
